

## Year Book Volume 8

Filesize: 7.21 MB

### **Reviews**

*It is a single of my favorite pdf. Yes, it is engage in, still an amazing and interesting literature. It is extremely difficult to leave it before concluding, once you begin to read the book.*

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1909 Excerpt: .every 10 lowering of temperature. The recent work of Delage on electric parthenogenesis has made possible an exact comparison of the methods of stimulating contractile tissues (muscles and sensitive plants) and the methods of causing artificial parthenogenesis in various eggs. The various means of stimulating muscles may be roughly classified as electrical, mechanical, thermal, chemical, and osmotic, and these are exactly the heads under which the various means of exciting eggs to develop may be arranged. In a series of recent papers, ! R. S. Lillie has shown that the essential effect of stimulation in contractile tissues is an increase in permeability of the plasma membrane, this change allowing the escape of the reaction-products of the reaction on which the energy transformations in contraction depend. This permits the reaction to proceed during contraction, until it is again checked by a second accumulation of reactionproducts during rest. Regarding the egg as a system of reacting substances, one would expect these to come to equilibrium at one point in their cycle. This equilibrium is upset, and development proceeds by an increase in permeability of the egg-membrane allowing the exit of some reaction-product (possibly Co<sub>2</sub>, as in the case of muscle). Normally, this is brought about by the entrance of a spermatozoon artificially by the various parthenogenetic agents. The recent work of Loeb has shown that many of the substances which cause parthenogenesis are hemolytic substances, increasing the permeability of blood-corpuscles to such a degree that the haemoglobin escapes....
