Book Condition: New. Publisher/Verlag: Springer, Berlin | Proceedings of the First International Symposium, ETHG Zurich, Switzerland, June 6-8, 1988 | Magnetic Bearings are bearings where the suspension forces are generated magnetically without any contact. The advantages to modern machinery are obvious: no mechanical wear, no lubrication, potential for high rotor speed, accuracy, and high dynamic performance, new constructional solutions to a classical problem in machine dynamics. The realization of such bearings is in rapid progress. Examples for application areas are turbomachinery, centrifuges, vacuum techniques, machine tool spindles, chemical industry, medical devices, robotics, high speed drives, spacecraft equipment, contactless actuators, vibration isolation. The Symposium is demonstrating the current state of the art in this developing field of mechatronics, showing actual research efforts, reporting on applications in the various areas, and discussing open questions. The main purpose of the Symposium has been to establish a common information basis for people working on magnetic bearings. It will point to promising areas, and it will help to facilitate decisions on research and development projects, and on investments for applications. | Applications in Space.- Research and Development of Magnetic Bearing Flywheels for Attitude Control of Spacecraft.- A 3(5) Degree of Freedom Electrodynamical-Bearing Wheel for 3-Axis Spacecraft Attitude Control Application.- Applications in Physics.- Radial Shear Force Permanent Magnet Bearing System with Zero-Power Axial Control and Passive Radial Damping.- High Precision Particle Beam Choppers.- Wide-Gap, Electro-Permanentmagnetic Bearing System with Radial Transmission of Radial and Axial Forces.- Ultra-Low-Friction, Zero-Power Magnetic Suspension System of the Spinning Rotor Vacuum Gauge.- Centrifuge for Epitaxial Growth of Semiconductor Multilayers.- Magnetic Bearings for Precision Linear Slides.- Applications in Robotics.- Applications of Magnetic Bearings in Robotics.- Special Bearings.- Lift Force Analysis in a Controlled - PM LMS Maglev Carrier.- Experimental Investigation of an Eddy-Current Bearing.- Stabilization of Rotor Motion.- Analysis on the Operating...
